Activity - 1

While setting up the C/C++ development environment in Visual Studio Code, I faced a few difficulties during the installation and configuration process. Initially, I had some confusion while installing Visual Studio Code and selected the all to path option during installation. I also faced difficulty finding and installing the correct C/C++ extension by microsoft from the extension market place. Another major issue by installing MinGW - W64 through MSYS2 and configuring the GCC compiler correctly. I was not sure which compiler package to install and where exactly the required files were located. I had to check the path settings and reset difficult because I was not familiar with window terminal command. I was able to successfully compile and run the C and program to display "Hello ! world!" , terminal.
