Activity-2

While working on the activity, I faced a few difficulties during the installation and setup process. First, I had some difficulty downloading and installing the correct Node.js LTS version, as I was not sure which version to select and where to download it from. After installing Node.js and npm were installed correctly using the terminal. I also faced some difficulty creating using the terminal. I also faced some difficulty creating a new folder and open the VS Code. Initially, another issue I faced Postman, as I was using it for the first time. This activity helped me understand Node.js, npm, Axios, APIs, and Postman better.
